

JORDAN PRESS FOUNDATION AMMAN ORDERS Q.I. PRESS CONTROLS CLOSED LOOP FAN-OUT CONTROL.

Oosterhout, December 2010 – End 2011 Jordan Press' biggest circulation national Arabian newspaper 'Al Rai' will start a fully Q.I. Press Controls equipped hybrid KBA Commander pressline in Amman. Q.I. Press Controls proudly confirms that due to Jordan Press Foundation's high quality demands for newspapers and semi-commercials printing, Q.I. Press Controls' intelligent solutions are favoured for the new pressline.

ABD, Q.I. Press Controls' closed loop Fan-out control system is going to be a major part of the top-register printing performance in Amman. While paper is a living fibre substrate, the dampening will widen the double width web during printing colour-after-colour. But ABD on all six printing units will adjust those fan-out deviations automatically thanks to the input from 24 of the in total 48 mRC+ scanning heads on the KBA Commander.

Jordan Press' KBA Commander with six towers, two folders and a dryer.

ABD register-nozzle bar stretching the web width by non-contact air pressure

Giffin Graphis, Q.I. Press Controls' agent for the Middle East build a good relation with Jordan Press Foundation during earlier IRS colour register sales and services. Giffin also confirms to be extremely happy that Q.I. Press Controls' latest mRC+ technology with micro-marks now is selected in combination with Q.I. Press Controls' worldwide proven ABD Fan-out register-technology: 'ABD operates much faster and continuously more accurate than any printing crew can perform. So after press-commissioning readers and advertisers will profit from the Commander's constant top-register printed fullcolour quality. Pay-off from this large investment in print quality-improvement will come from a three-fold reduction: in setup-time, material and crew'.

The Jordan Press Foundation publishes the national Arabic daily newspaper, 'Al Rai', which has the biggest circulation and advertising section in the country. Other titles include the 'Jordan Times', an English publication launched in 1975, and 'Hatem', a monthly magazine for children and youngsters.

About Q.I. Press Controls:

Q.I. Press Controls is the global leader in the supply of innovative and high-tech closed loop control equipment for all web offset printing presses. They offer a total solution for fully automated press control: colour and cut-off register control (mRC), closed loop colour control (IDS) and automatic fan-out control (ABD). In addition they offer the web based production database MIS, the Intelligent Quality Management System (IQM), which completes Q.I. Press Controls' innovative portfolio. Each Q.I. Press Controls' system is designed to generate substantial cuts in printed waste and costs while enhancing and stabilizing the quality of your printing process at the highest level. With proven examples of return on investment times often less than one year, Q.I. Press Controls helps customers to always stay one step ahead of the competition, with the latest technology.

We are everywhere! With eight offices worldwide and global agencies, Q.I. Press Controls guarantees a fast personal customer service and support network. For more information: www.qipc.com
